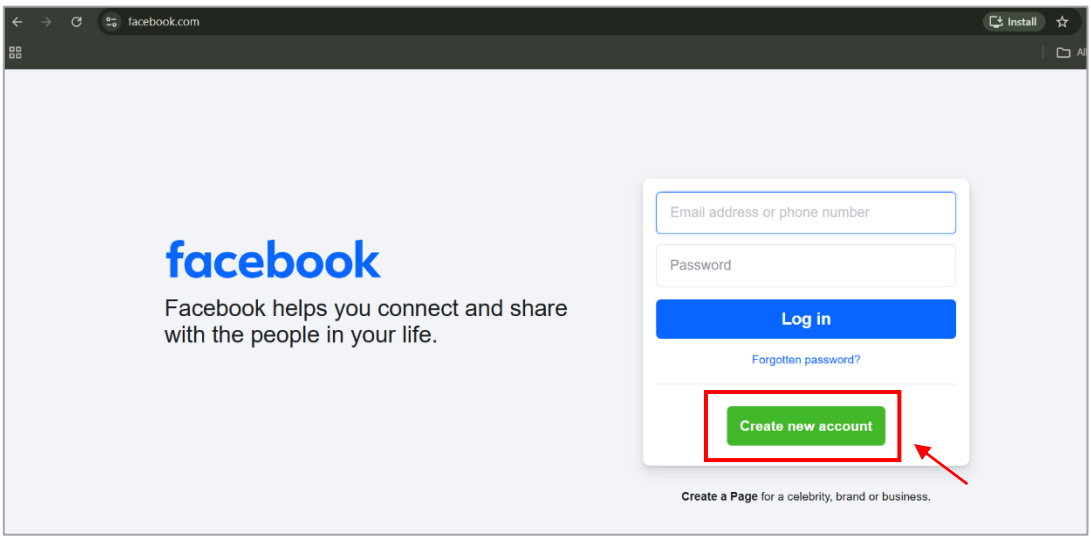
Pre-requisites

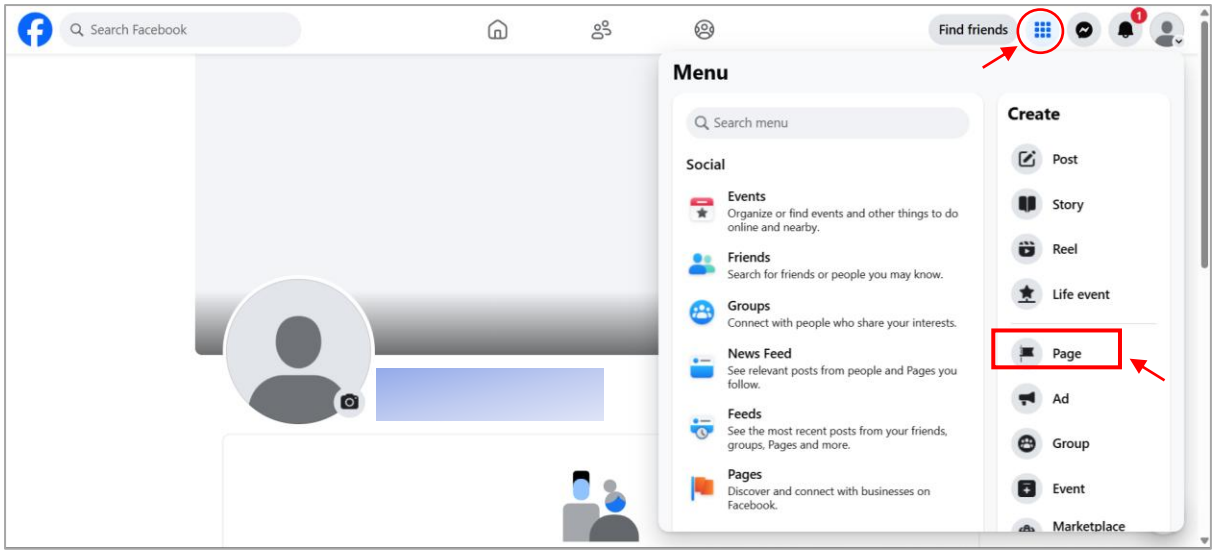
- A personal Facebook account (used as admin/owner – not public).
- A Facebook Page for your business.
- An Instagram Business or Creator account.
- Your Instagram Business account linked to the Facebook Page.

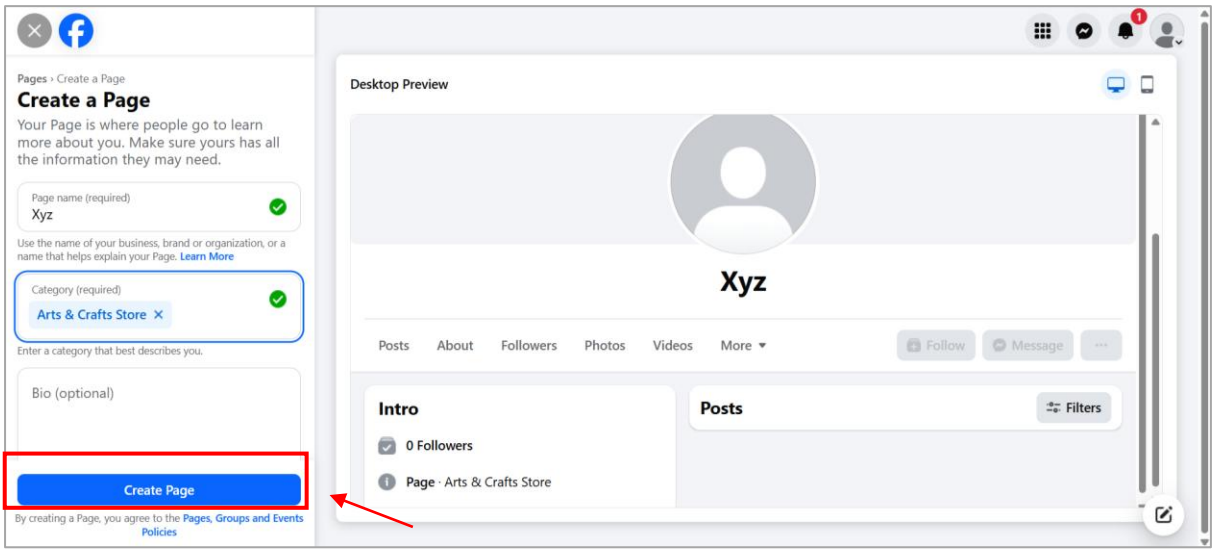
1. Create your Facebook account with a page

- Go to Meta Business: https://facebook.com/create
- Log in with your personal Facebook account (if already have an account).
- Or Click Create account.
- Enter: Your name, email and password
- Click Submit.



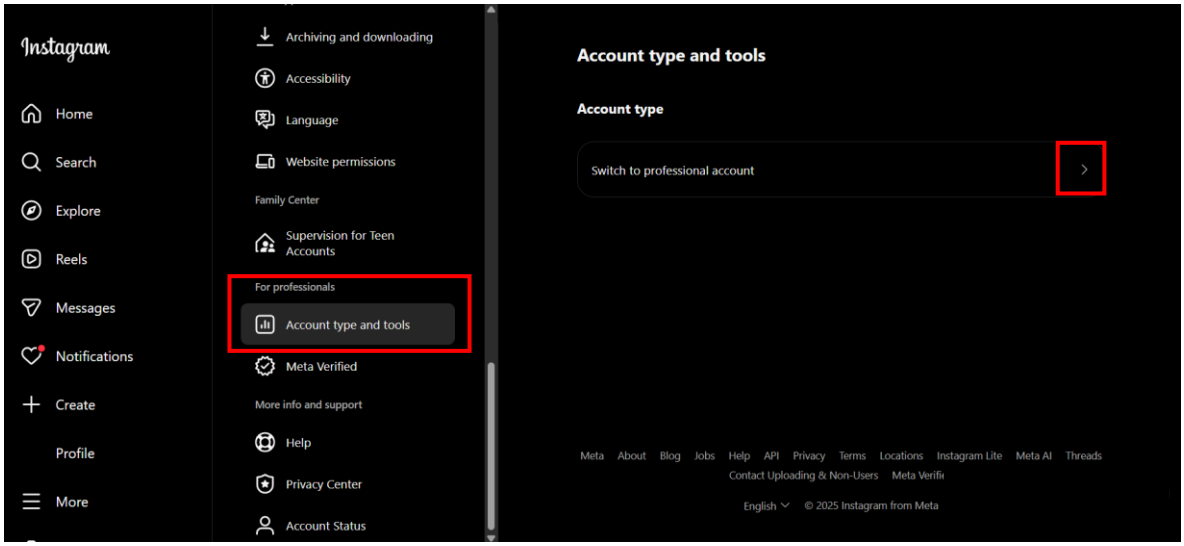
- Now, In Settings (gear icon):
  - Go to Accounts → Pages.
  - Choose one:
  - Add existing Page (if you already have one).
  - Create a new Page (if you don't).

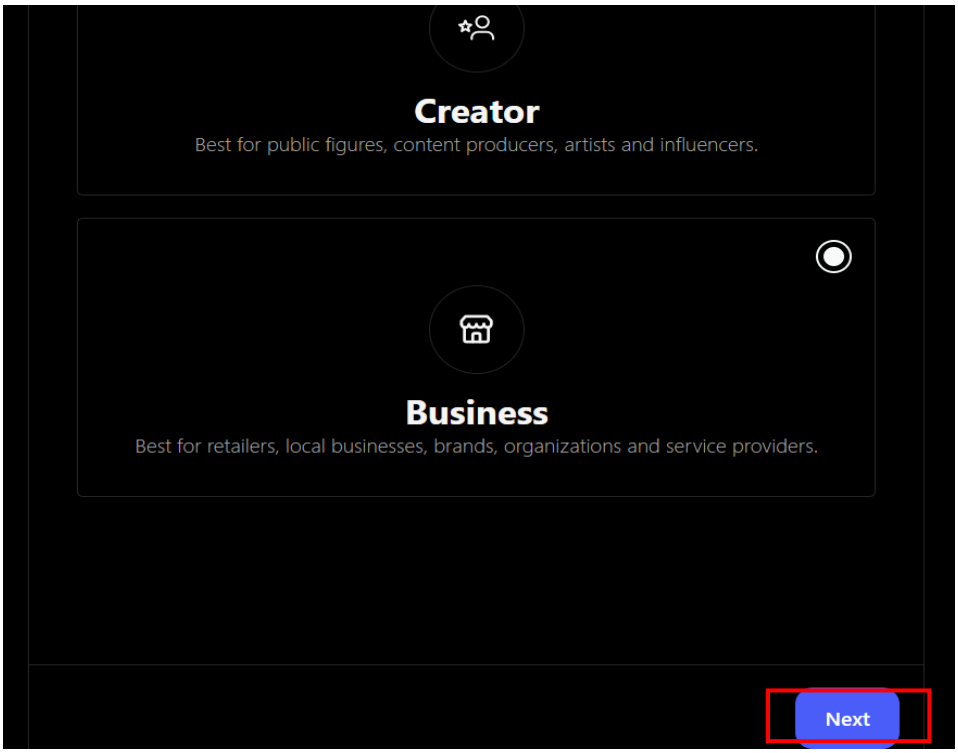




2. Create / convert your Instagram Business account & link to Facebook

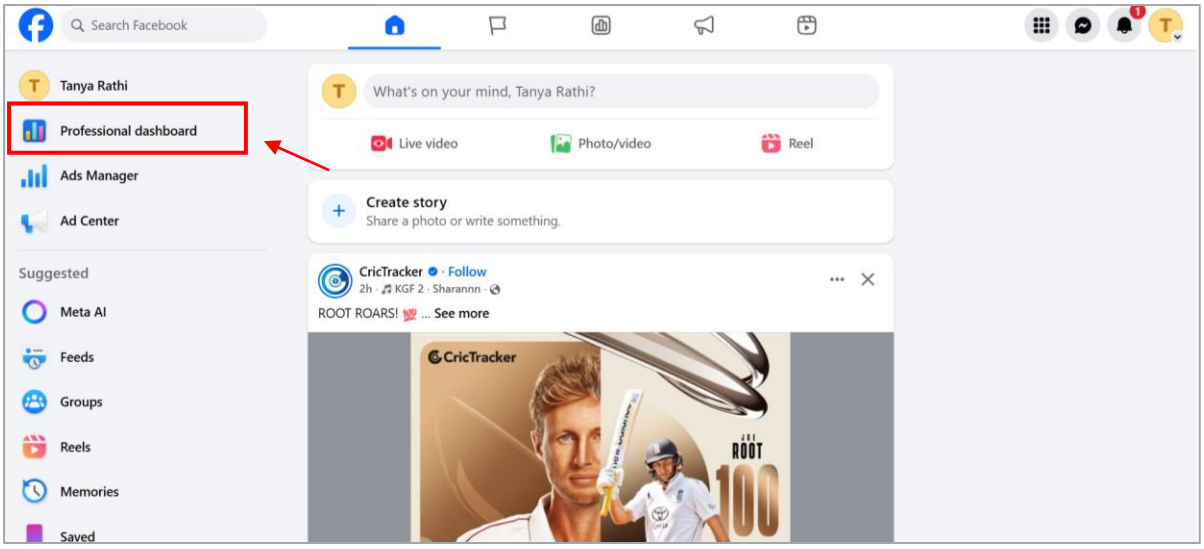
- Create your profile on Instagram then, Go to your profile.
- Tap ☰ (menu) → Settings and privacy.
- Look for Account type and tools under “For professionals”.
- Tap Switch to professional account.
- Choose Business (or Creator if that’s your use case).
- Complete the setup (category, contact info, etc.).

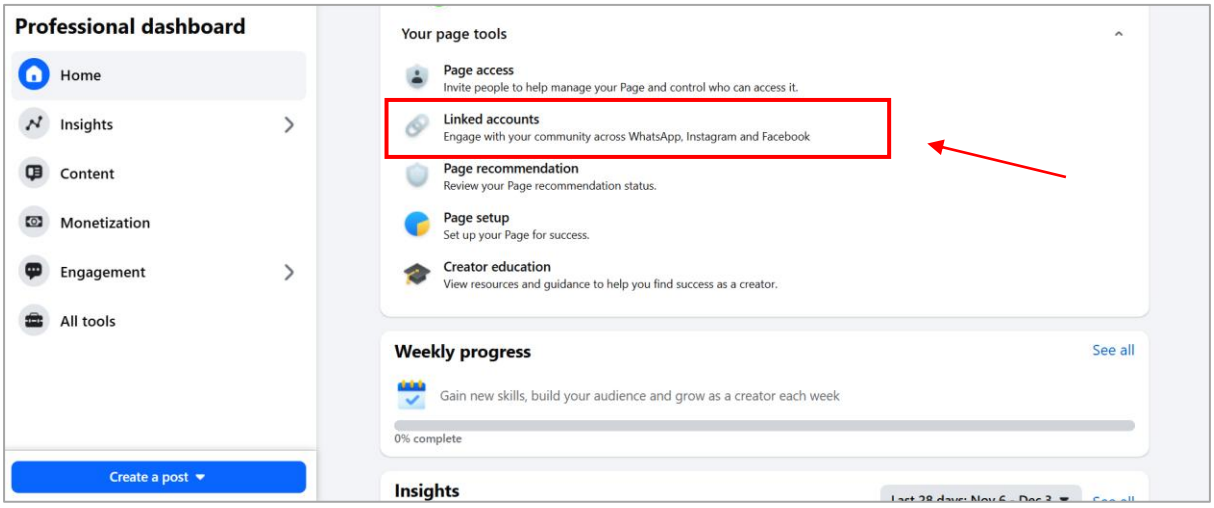


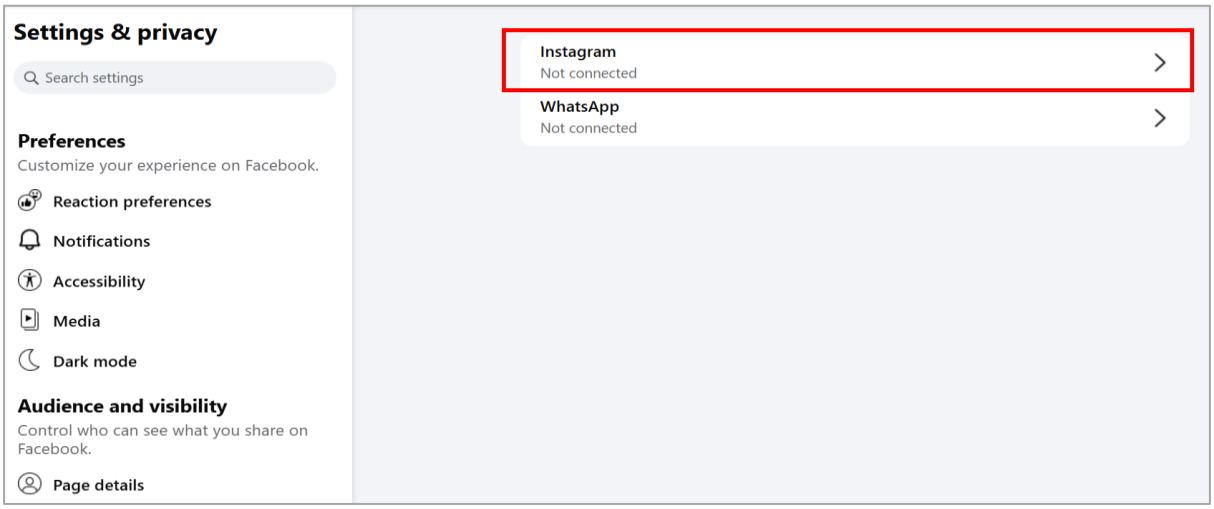


2.1 Link Instagram Business to your Facebook Page

- From Instagram: Go to your Facebook business profile.
- Under Profile at home page, click Professional dashboard, find Page.
- Tap Connect or create a Facebook Page.
- Select your existing Facebook Page or create one.







- Confirm the connection by clicking continue for each dialog box.

This link is mandatory for using the Instagram Graph API with Meta apps.

3. Create an app in Meta for Developers

- Go to Meta for Developers: https://developers.facebook.com/
- Log in with the same Facebook account.
- In the top-right, click My Apps → Create App.
- Choose use case as “Others” or “Create an app without use-case” then select app type as “Buisness”. Enter: App name, Contact email, Business account (default).
- Click Create app.
- In the App Dashboard → Settings → Basic: Note your App ID and App Secret.

Authenticate and request data from users with Facebook Login
Our most common use case. A secure, fast way for users to log into your app or game and for the app to ask for permissions to access their data to personalize their experience. About Facebook Login
Allow users to transfer their data to other apps
Give users the ability to transfer their information from Meta apps to other services. About data portability apps
Share or create fundraisers on Facebook and Instagram
Raise money and reach more people with Meta's Fundraiser API. Create or share existing fundraising campaigns on Facebook and Instagram. About the Fundraiser API
Join ThreatExchange
Join ThreatExchange to share signals with other members about online threats, including terrorism, malware, CSAM, and other harmful content, to help keep people safe on the internet. About ThreatExchange
Create an app without a use case
Select this option if you'd like to get an app ID without adding any permissions, features or products.
Looking for something else?
If you need a use case that isn't on the list, select an App Type and add the permissions and products you need.
Other
Your app will be created in the old experience. Then, you'll choose from all available permissions, features and products.

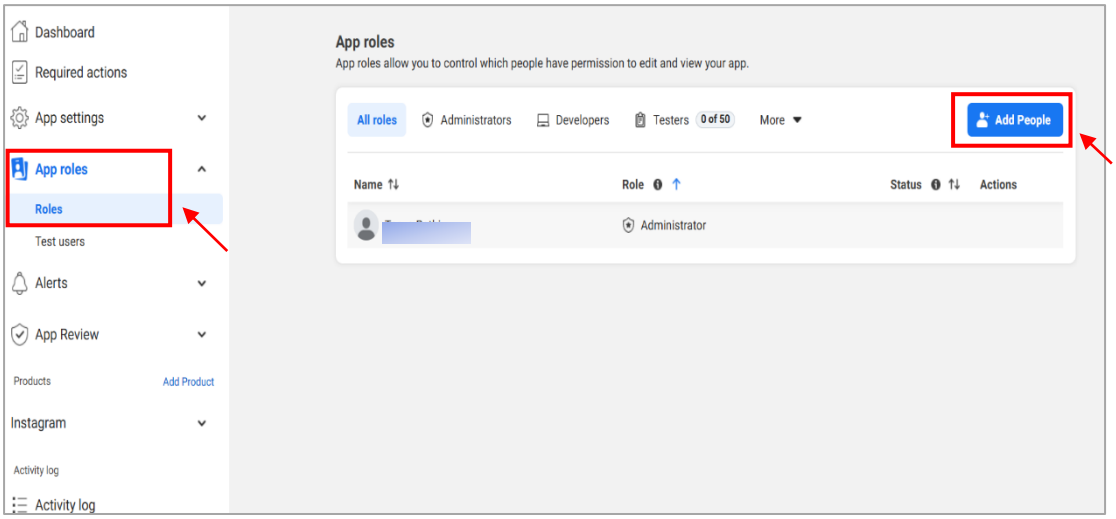
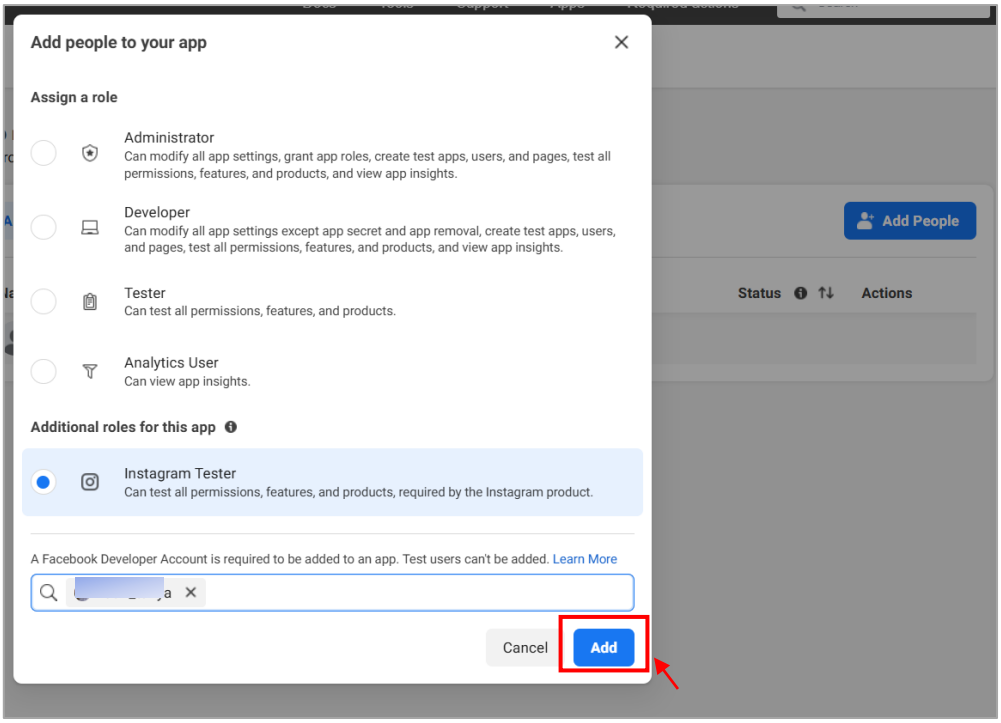
4. Add products: Add Instagram API (Instagram Graph API with Login)

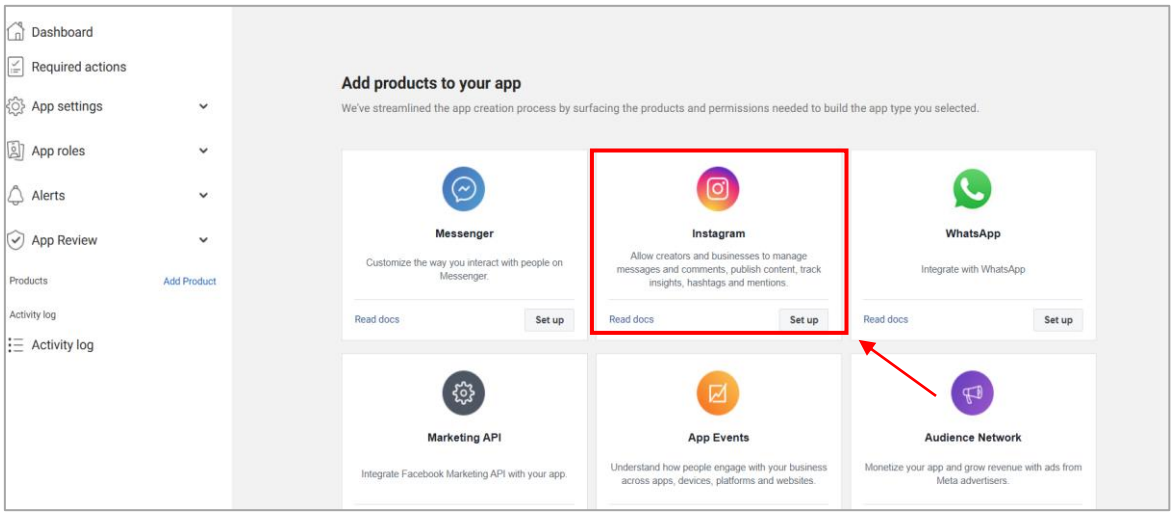
Meta's newer docs show Instagram API with Instagram Login & Instagram API with Facebook Login options.

- For Instagram API setup, the Instagram Tester role is given to your Instagram account.
- Go to Roles and then grant/add the role for your Instagram username.

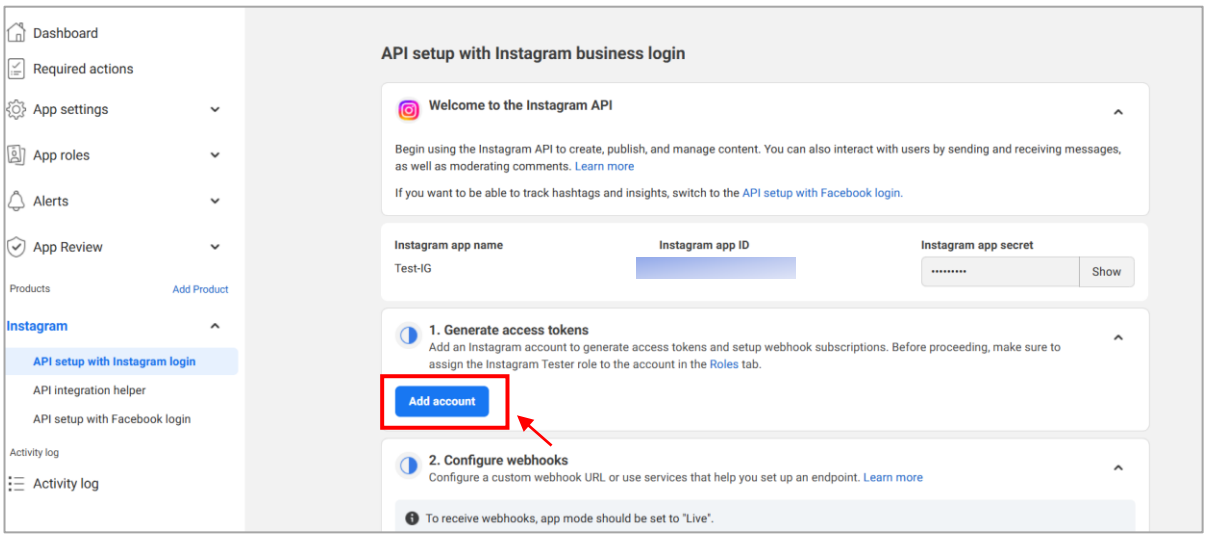




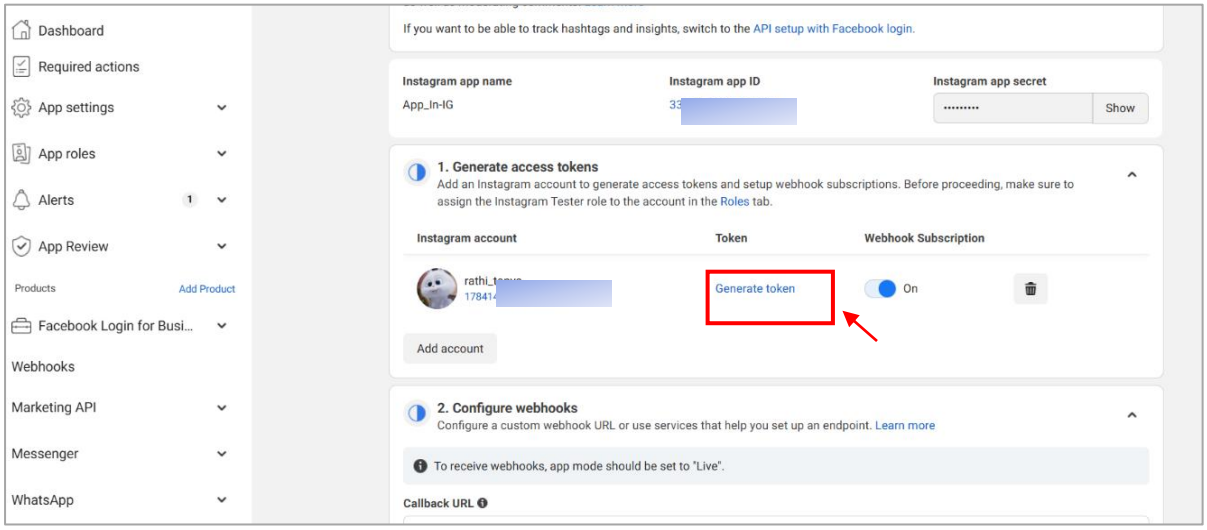
- Now in the App Dashboard, under Add products:
- Look for Instagram / Instagram API.
- Click Set Up.



- For login-based flows, add your Instagram account.



- This will add Instagram → Basic settings / API setup sections to your app.
- You should see a Generate token button. Click it.



- Meta will generate a long-lived Instagram user access token (often already 60-day). Copy and safely store it (server-side).

You can then use it to call the Instagram Graph endpoints, e.g.:

```
→ GET https://graph.instagram.com/me
  ?fields=id, username
  &access_token={GENERATED_TOKEN}
→ GET https://graph.instagram.com/me/media
  ?fields=id, caption, media_type, media_url, permalink, thumbnail_url, timestamp
  &access_token={GENERATED _TOKEN}
```

5. **Configure permissions (scopes) [Optional]**

   In App Dashboard → Instagram → Settings / API setup and App Review → Permissions & Features, you'll typically need (depending on use case):

   Common Instagram Graph permissions:

   - instagram_basic or instagram_business_basic
   - instagram_graph_user_profile
   - instagram_graph_user_media
   - instagram_manage_comments (if you'll manage comments)
   - instagram_manage_insights (for insights/analytics)
   - pages_show_list
   - pages_read_engagement

   → For development, you can test with: Your own account

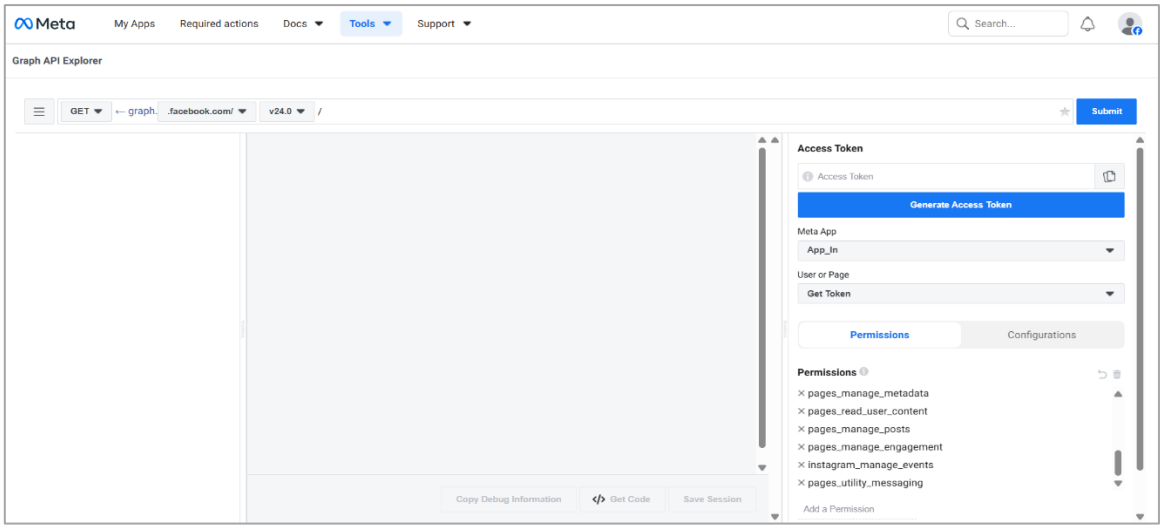
   → For production, Meta will require App Review with a clear description and screencast of how you use these permissions.

6. **Generating Instagram User ID, Page ID and Page Access Token**

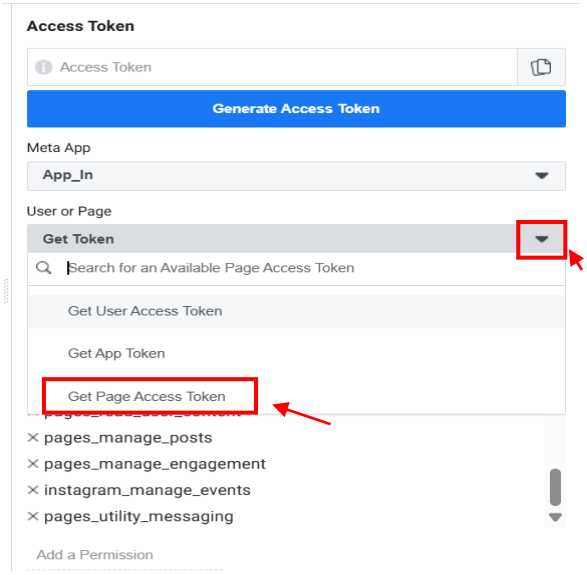
   Now, we have an Instagram Graph API Access token already generated above. For generating Page ID and Page Access token we need requirements like:

   - Instagram account = Business or Creator (Already done)
   - Instagram account is connected to a Facebook Page (Already done)
   - Instagram User Access token has permissions:
     - pages_show_list
     - pages_read_engagement
     - instagram_basic
     - instagram_manage_insights

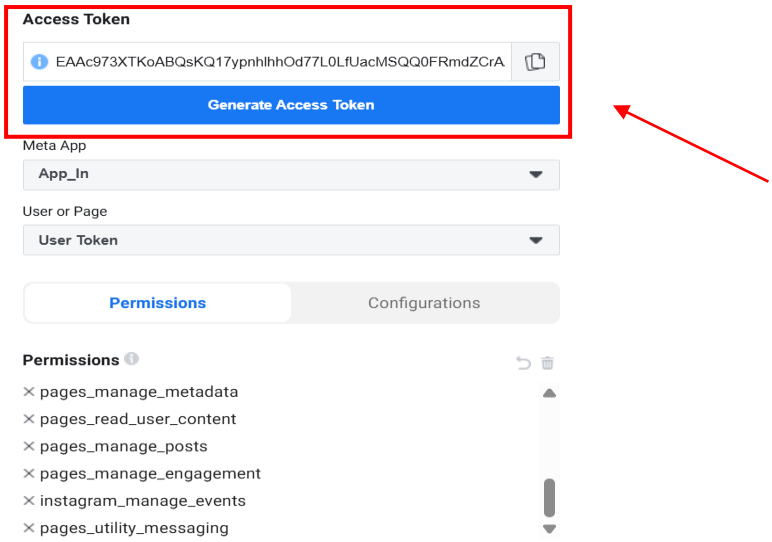
   Step 1: Go to Meta for Developers: https://developers.facebook.com/tools then open Graph API Explorer, something like below will open in fig.:



Step 2: Then, Click on User or Page Get Token dropdown and click on Get Page Access Token.



Step 3: Then, Reconnect your account. After that you will see some generated token here:



Step 4: Now using that FB User Access Token and the below command in the bar to generate FB page ID:

```
→ GET https://graph.facebook.com/v24.0/me
```

You will get the FB Page ID and Username.

Step 5: Now we request some permissions on the User token, then exchange it for Page to make it page access token as below:

- pages_show_list
- pages_read_engagement
- instagram_basic
- pages_manage_metadata
- pages_manage_engagement
- pages_manage_posts
- instagram_content_publish
- read_insights
- read_page_mailboxes
- pages_messaging
- instagram_manage_comments
- instagram_manage_insights
- instagram_manage_messages
- pages_read_user_content
- instagram_manage_events
- pages_utility_messaging

After those permissions, click again on generate token and finally you will get Page Access Token.

Step 6: Now using that Page Access Token and the below command in the bar to generate Instagram User ID:

```
→ GET https://graph.facebook.com/v24.0/me/instagram_accounts
```

You will get the User ID.
